FINAL PROJECT / OPTION A

CEERIES

Final Project Documentation

Web Publishing and Digital Advertising

HYDRA SLAY LIP OIL • DIGITAL MARKETING WEBSITE

An integrated student website presenting CEERIES products, brand storytelling, social media marketing, an email campaign mockup, and product/customer data retrieval.

PROJECT ROUTE	WEBSITE SCOPE	PRODUCT PRICE
Option A – Enhanced Preliminary Project	Six linked website pages plus integrated campaigns	₱199 per individual lip oil

Prepared from the supplied project documentation and course requirements. Implementation claims are distinguished from demonstrations and items requiring final confirmation.

01 / CONCEPT AND SCOPE

Project overview

The website is designed to promote CEERIES as a Filipino lifestyle brand while giving visitors a clear path from product discovery to inquiry.

The five questions the website answers

QUESTION	PROJECT RESPONSE
WHO?	CEERIES, a Filipino lifestyle brand founded by Riona Karl Cee, with this website centered on its Hydra Slay Lip Oil range.
WHAT?	Seven individual lip oil shades, presented with imagery, product descriptions and ₱199 unit pricing.
WHY?	Brand-provided benefits emphasize hydration, a lightweight non-sticky feel, shine and subtle tint.
WHERE?	The website and social accounts provide online discovery and contact. Physical location details must be confirmed.
HOW?	Visitors can browse, search, build a demonstration cart, and submit a locally saved inquiry; checkout and message delivery are not active.

Implementation approach

The source uses HTML, CSS, and JavaScript, with a small Node.js server for the local demonstration API and form endpoints. A static-hosted version displays JSON datasets and stores demonstration form data in the visitor's browser. The interface uses product photography, rose-toned branding, responsive layouts, and interactive browsing controls.

What has been extended for Option A

- Expanded product discovery to seven individual lip oil shades; discontinued set references were removed from the current catalog.
- Added product search, inline details, saved-cart quantities, subtotal display and an inquiry handoff.
- Integrated social and email campaign presentations, testimonial/gallery controls, FAQs and promotional multimedia.
- Included products and fictional-customer datasets with a dedicated Project Data demonstration page.

Scope note: CEERIES also describes bags and scrunchies within its broader brand story, but the documented website catalog focuses on Hydra Slay Lip Oil.

02 / REQUIRED PAGES

Part I / Website development

The original landing page has been expanded while retaining the brand's visual identity and provided multimedia.

REQUIRED PAGE	DOCUMENTED CONTENT	ASSESSMENT
Home / Landing	Logo, hero, tagline, CTA, About/founder story, featured shades, promotion and embedded original 41.6-second video.	Covered in supplied materials
Features / Formula	Feature explanations and visuals for hydration, comfortable wear, shine and tint; infographic and 13 FAQ topics.	Covered in supplied materials
Products / Services	Seven shades with images, categories, descriptions, ₱199 prices, inline product details, search and cart/inquiry actions.	Covered in supplied materials
Contact Us	Name, email, subject and message fields; validation and locally saved confirmation; contact/social information.	Present; live sending not implemented

User journey

Discover the brand → Explore the features → Compare shades → Add selections to the demonstration cart → Continue to the Contact Us inquiry form.

Multimedia integration

The original promotional film is reported as embedded on the homepage with player controls, meeting the requirement that visitors can view the video directly without leaving the page.

Important limitation

Contact inquiries and newsletter sign-ups are demonstration features. They do not deliver messages to the company or process purchases. This should be stated clearly during the presentation, and the instructor should confirm whether a demonstration-only inquiry workflow is acceptable.

03 / PROMOTION AND CAMPAIGN

Part II / Social media marketing

The project includes a product-discovery campaign for the Hydra Slay Lip Oil collection, with promotional artwork and an Instagram-style social post mockup.

CAMPAIGN ELEMENT	DOCUMENTED APPROACH
Goal	Promote product discovery and direct visitors to the lip oil collection.
Audience	Teenagers, college students, young professionals and beauty enthusiasts interested in everyday lip products.
Creative	CEERIES-branded promotional visual, campaign text, hashtags and an Instagram-style post.
Call to action	Promotional content encourages visitors to view the product catalog.
Offer handling	Supplied art mentions 20% off; the website identifies this as a preview, not an active discount.

Part III / Email marketing

A viewable email mockup is included in the Campaigns page and the original email-design PDF is referenced in the project source.

REQUIRED EMAIL ELEMENT	DOCUMENTED EVIDENCE
Logo and subject	CEERIES branding and a marketing subject line.
Header image / banner	Promotional brand/product artwork.
Main message	Short marketing copy introducing the product and offer preview.
Call to action	A product-focused button directing attention to the collection.
Company information	Website, contact information and social media references.

Before submission: proofread the original email PDF for any unrelated template copy, ensure promotional terms are consistent, and add a full email-mockup screenshot to the evidence appendix. No actual email delivery is required by the provided instructions.

04 / RETRIEVAL DEMONSTRATION

Part IV / API and data integration

The assignment requires GET retrieval and display for products or services and customer information. Both datasets are described in the submitted project material.

DATASET	GET OPERATION	DATA DISPLAY
Products	GET /api/products	Seven Hydra Slay lip oil entries retrieved from data/products.json.
Customers	GET /api/customers	Two explicitly fictional demonstration customer records retrieved from data/customers.json.

Hosting behavior

On the local Node.js server, both GET endpoints serve product and fictional-customer records. In static hosting, the site falls back to bundled JSON data. The Project Data page is designed to render the retrieved datasets in tables.

Additional operations (beyond the minimum)

The local development server also describes POST endpoints for inquiries and newsletter interest. These are outside the minimum GET requirement. Static-hosted form saving does not provide a shared customer database or email delivery.

Verification evidence needed

- Capture the Project Data page with both retrieved datasets visible.
- Capture browser Network activity showing successful GET responses and their returned data, or demonstrate the two local endpoints directly.
- State clearly which version is being demonstrated: local Node.js API or static JSON retrieval.
- Keep fictional records separate from private inquiry submissions.

Review status: the supplied documentation and public repository describe the GET implementation; a separate live API response check was not reproduced as part of this document-format review.

05 / IMPLEMENTATION REVIEW

Functionality and quality assurance

The following checks were reported in the source project documentation. They are not all independently re-tested by this document review.

FUNCTION	REPORTED BEHAVIOR
Browsing and selection	Shade selector updates visuals and details; product search filters results; galleries and testimonial controls respond.
Product cart	Visitors can add shades, change quantities, remove selections and view totals; cart data is browser-saved.
Inquiry flow	Cart selections can be passed to the contact form; forms validate input and save demonstration records.
Responsive behavior	Six pages reported checked at 1440 × 1000 (desktop) and 390 × 844 (phone) without horizontal overflow or broken image assets.
Multimedia and motion	Promotional video loads with controls; responsive menu, FAQ expansion, feedback cues and reduced-motion behavior are described.
Data handling	Products/customers are served through local GET endpoints or static JSON fallback; form data is not exposed as public customer records.

Known demonstration boundaries

- No real payment checkout or finalized customer orders.
- No actual contact-email delivery or subscription email dispatch.
- The 20% social advertisement is a mockup, not an activated promotion.
- Customer dataset consists of fictional records, not actual customer details.

Publication checks for the group

Before submission, re-test navigation and form actions on the final hosted URL, review product pricing consistency, inspect mobile layout, open the promotional video, and demonstrate GET requests during the presentation.

06 / RESPONSIBILITIES

Group member contributions

Contribution summaries below are retained from the supplied document. Each member should confirm the accuracy of their individual statement before submission.

AL

Almer Lalic

Worked on the development and improvement of the CEERIES website, including website layout, product presentation, navigation, and interactive features. Also assisted in organizing promotional content and preparing project documentation.

SY

Sean Yambao

Assisted in designing and improving the CEERIES website's user interface, including page layouts, product visuals, and promotional materials. Also helped enhance the website's appearance, responsiveness, and overall user experience.

BO

Benedict Ong

Assisted in preparing the website content, marketing campaign materials, and project documentation. Also worked on organizing product information, developing promotional messages, and reviewing the website against the Final Project requirements.

KY

Kenaz Brian Yanez

The supplied document credits Kenaz with leading overall website design and development, including page layouts, interactions, multimedia and marketing integration, data displays, testing, GitHub/Vercel publication, and documentation coordination.

Approval needed: verify that these descriptions reflect the actual work completed. Do not submit them as certified group assignments until all members agree.

07 / FINAL INFORMATION

Business details and submission links

ITEM	VALUE FROM SUBMITTED DOCUMENT	FOLLOW-UP
Business contact email	riona.dimalanta721@gmail.com	Confirm permission to publish and that it is the official contact.
Phone	09473105299	Confirm number and approval for public use.
Location	San Fernando, Pampanga	Reconcile with earlier CEERIES material mentioning San Fernando, Pampanga; street address not supplied.
Business hours	8:00 AM–5:00 PM	Confirm days of operation and actual hours.
Official availability	Not established	Add current stock/availability or clearly state that it is not provided.
Promotional terms	20% offer preview only	Add dates, conditions and adjusted prices if made active; otherwise retain “mockup” label.

Published project references

RESOURCE	LINK / IDENTIFIER
Hosted website	https://sites-ceeries.vercel.app/
Public source repository	https://github.com/DDeviseth/Ceeries
Instagram	https://www.instagram.com/ceeries.ph/

URL note: the GitHub repository is publicly visible. The website URLs could not be independently opened in this review, so the group should test the final hosted link from an incognito browser window before submission.

08 / DEMONSTRATION SCREENSHOT

Evidence / Contact form saving

The submitted screenshot shows a contact inquiry success message and the “ceeries-inquiries” key in browser local storage.

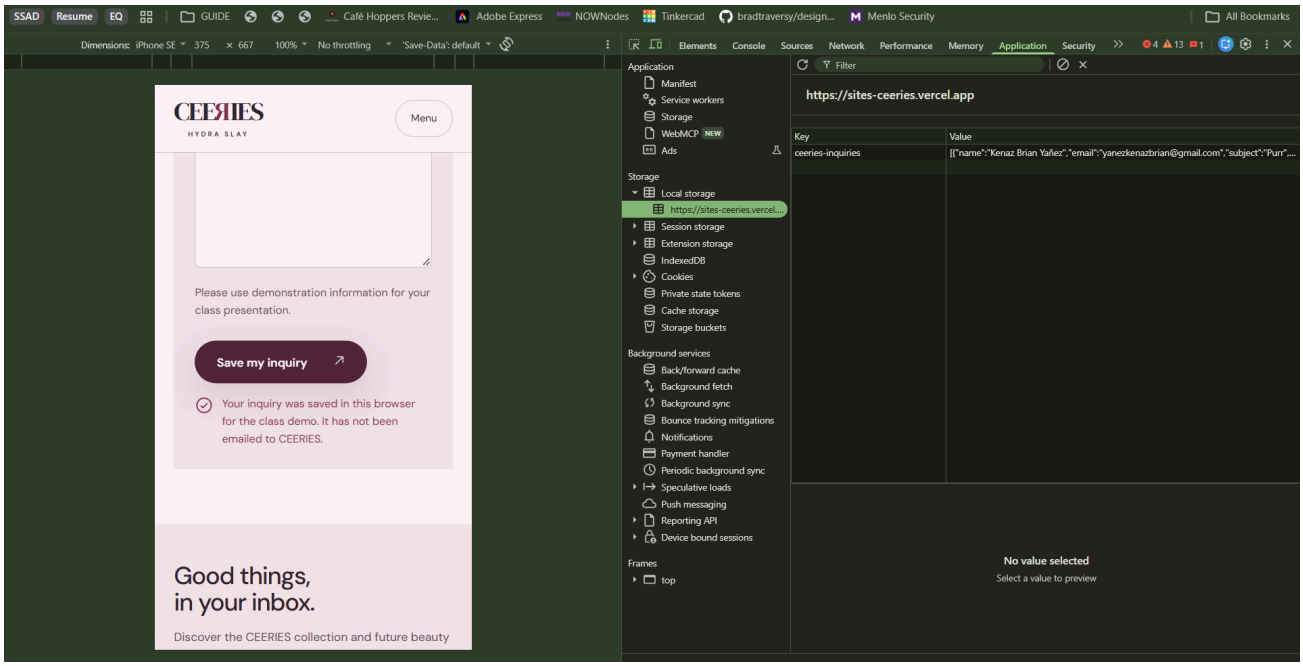

Figure 1. Browser storage evidence from the supplied documentation. The screenshot shows a demonstration save, not email delivery.

What this evidence proves

- A submission can be stored locally in the visitor’s browser.
- The form produces visible confirmation feedback.

What it does not prove

- The message is delivered to the company.
- Customer records are retrieved through a GET operation.

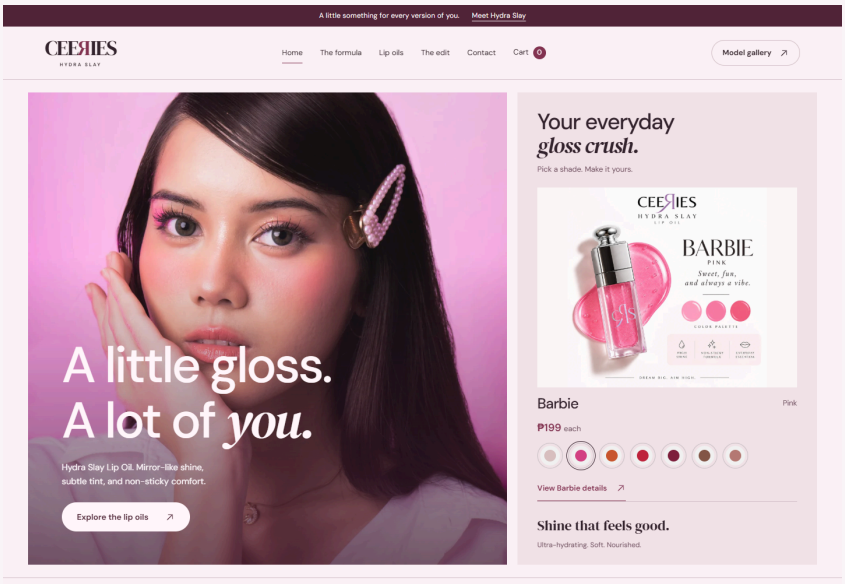

For Part IV, provide separate screenshots of the Project Data page and the successful GET response information.

A01 / SUPPLIED DESKTOP AND MOBILE VIEWS

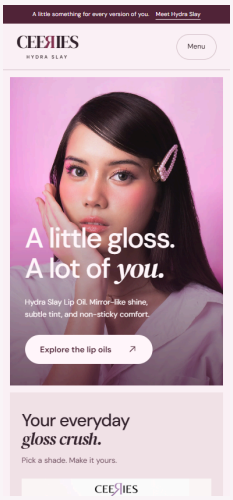

Appendix / Website screenshots

The following images are retained from the original documentation and placed side-by-side for easier review.

Home / landing page

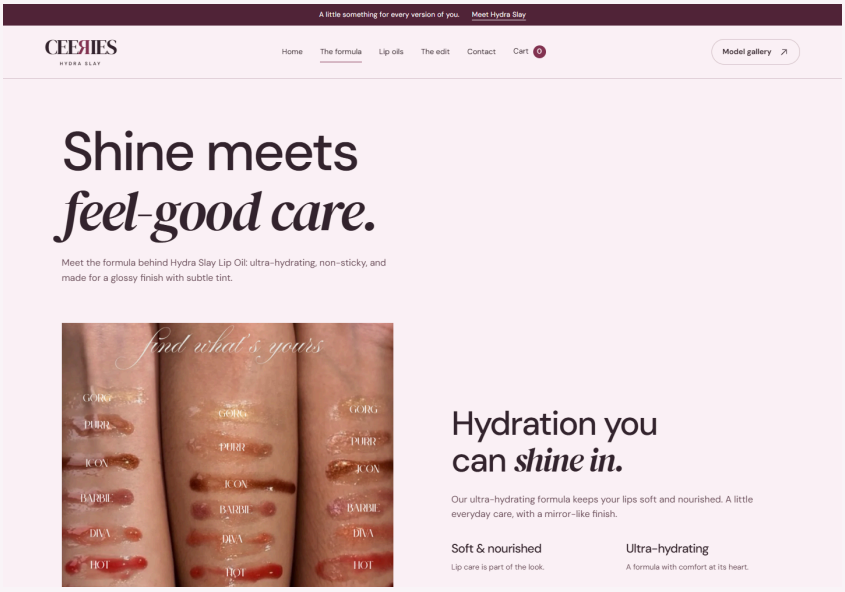

DESKTOP / 1440 × 1000

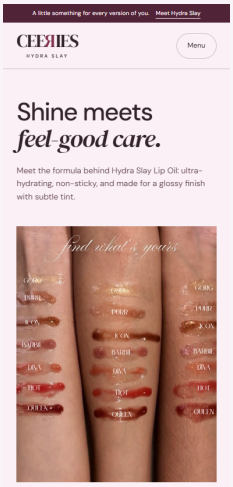

MOBILE / 390 × 844

Hero presentation and shade selection appear on both screen sizes.

The Formula / features

DESKTOP / 1440 × 1000

MOBILE / 390 × 844

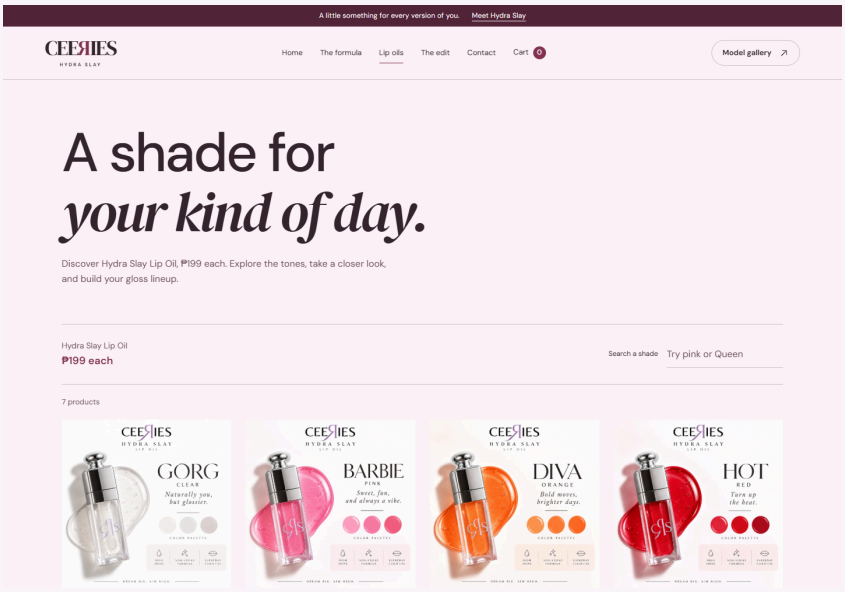

Product benefit content is arranged for desktop and mobile.

A02 / SUPPLIED DESKTOP AND MOBILE VIEWS

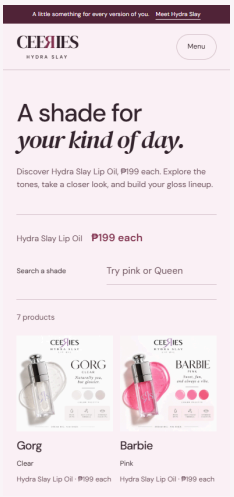

Appendix / Website screenshots

The following images are retained from the original documentation and placed side-by-side for easier review.

Products / catalog

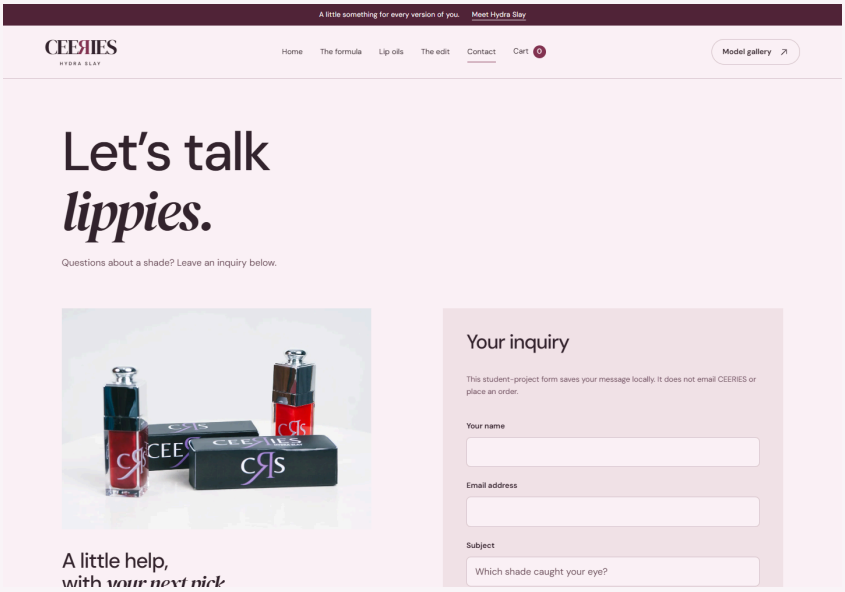

DESKTOP / 1440 × 1000

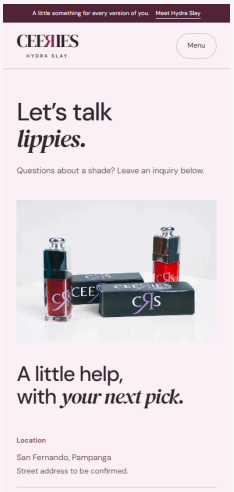

MOBILE / 390 × 844

Product cards, filters, search and ₱199 unit price are presented in responsive layouts.

Contact Us

DESKTOP / 1440 × 1000

MOBILE / 390 × 844

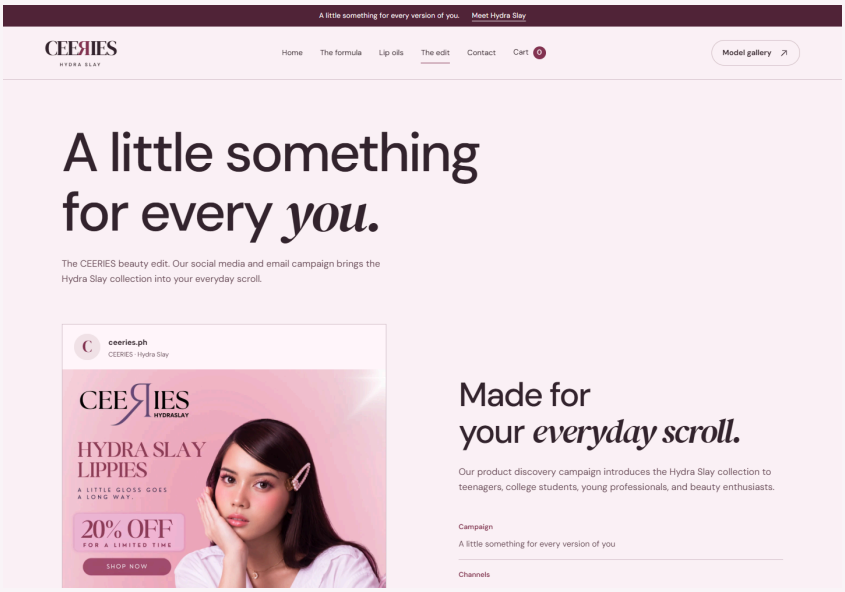

The inquiry form and brand contact introduction adapt to narrow viewports.

A03 / SUPPLIED DESKTOP AND MOBILE VIEWS

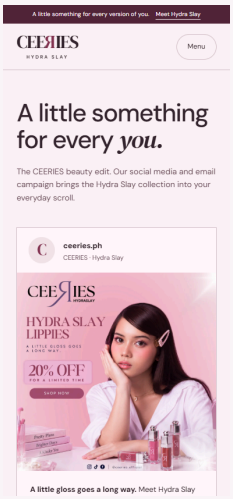

Appendix / Website screenshots

The following images are retained from the original documentation and placed side-by-side for easier review.

Social and email campaigns

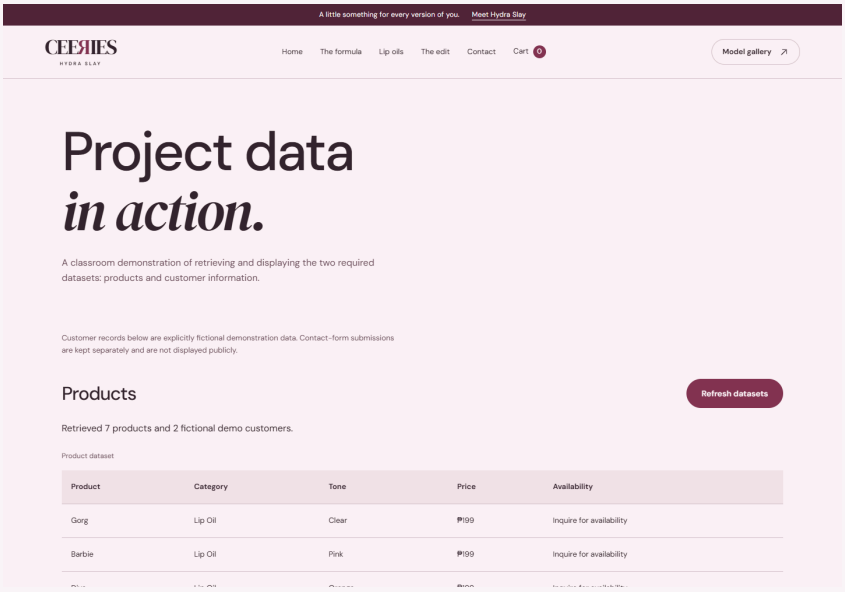

DESKTOP / 1440 × 1000

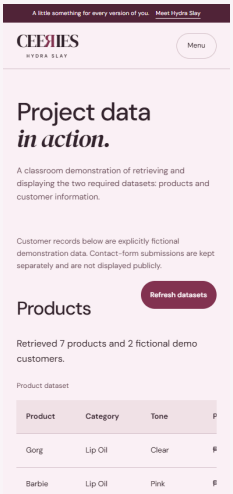

MOBILE / 390 × 844

The campaign landing content is shown; add a separate full email mockup capture.

API / Project Data

DESKTOP / 1440 × 1000

MOBILE / 390 × 844

The interface displays the product/customer data demonstration; add GET network evidence.

09 / GROUP SIGN-OFF

Final submission checklist

The website and documentation are substantially mapped to the course requirements. Complete the following checks before a group representative submits.

FINAL CHECK	STATUS
Verify official CEERIES contact details and resolve the San Fernando location discrepancy	Not confirmed
Confirm all four member contribution descriptions	Not confirmed
Open the final Vercel URL and test all key buttons/forms on desktop and mobile	Recheck
Demonstrate the two required GET datasets and capture successful response evidence	Add screenshot
Proofread the original email PDF and capture the full email mockup	Add evidence
Decide whether 20% discount remains a mockup or has approved terms/dates	Confirm
Check promotional film playback and pricing on all pages	Recheck
Include complete source code, marketing assets and documentation for one representative to submit	Confirm

Submission note

Only one group representative should upload the finished project, including the website files and the instructor-required documentation. Keep source claims, published features and screenshots consistent with the version actually submitted.

Assessment summary: based on the supplied documentation, all four Final Project components are represented. Final acceptance depends on verified implementation, instructor expectations for contact functionality, and completion of the outstanding confirmation/evidence items.
